## Fair Calendar 2018:

Like in 2017 we continue to meet our clients on most important fairs in Germany and abroad.

We are pleased to welcome you at:

Fair	Location	Date	Booth
R+T Stuttgart	Stuttgart, Germany	27.02- 03.03.2018	Hall 7 Booth 7D31
R+T Asia	Shanghai, China	20.03.- 22.03.2018	Hall N5 Booth D01-6
Heimtextil	Frankfurt, Germany	09.01.- 12.01.2019	TBA

We will send free tickets to all our active clients on request.  
Please contact our sales department.

Dear Sirs,

we are excited to tell you about the things going on at Huegin-Trietex, Sundrape and HMR and we have prepared plenty of news for this year and the coming R+T Show in Stuttgart and Shanghai.

Huegin-Trietex is increasing the attractivity of its architectural roller blind clutch „Rolpro“ with offering more solutions. A brand new silent roller blind motor in combination with an extremely easy to install bracket, a double bracket to allow the simultaneous installation of sheers and black out fabric and a connector bracket for motorizing two roller blinds with only one motor. But this is far from all - we can also announce availability of our new runner for curtain track solutions that allows even extreme bendings of down to 200mm radius. And last but not least take a look at our upcoming new motor series.

Sundrape is showcasing its new Roller Blind XL- a large area shading solution with highest reliability. Especially for use in the health care industry there will be a new runner for the Star Vertical Blind system with roller bearings.

At HMR Portugal we have been investing heavily in expanding our production again and we are continuing on this with also new products on the way.

You think this would be already all for 2018 ? Not at all - Sundrape is working on an update of the proven „Future“ vertical blind track as well as on additional mounting options for the Quadro roller blinds. And Huegin-Trietex is working on a new series of motors.

Thank you for your cooperation and we look forward to see you soon.

Walter Hügin

Timo Hügin

## Sundrape Roller Blind XL - moving the limit.

Sundrape is showing at the R+T for the first time their newly developed Roller Blind XL. A solution for large area shading. The picture shows one of our recent projects on the Four Seasons Kuwait top level floor dining area with roller blinds of up to 2,40 meters wide and a drop of up to 13,5 meters. These specially developed brackets for large sized motorized roller blinds also allow adjusting the alignment of the fabric and were designed for highest reliability.

#### RolPro - Additional Products on the way.

We are increasing our offerings around our architectural roller blind clutch „RolPro“. First of all we have developed a bracket for motorized roller blinds that allows to „click“ in the motor without any additional tools - making installation on large sites more cost efficient and trouble shooting easy. You will need a tool only to screw the brackets to the wall/ceiling - everything else is just click and go. For this we are also offering a high end silent roller blind motor from European production.

Another item to make installation more easy is our double bracket - that combines sheer and blackout with one easy to install clutch. Available for manual or motorized operation.

We are also announcing a connecting bracket to allow to motorize two roller blinds with only one motor - less motors, less wiring, less costs.

With all these new solutions the RolPro series can offer solutions for almost all installation requirements.

One of our recent projects - The Kuwait Institute for Science and Research with almost 2.000 RolPro gears installed.

#### News from our Partner Sundrape.

Beyond the large area shading solution „Roller Blind XL“ Sundrape has been active in providing new products and solutions.

One big step was the presentation of the new fabrics collection that was introduced during the summer period.

Another novelty is the new runner for the vertical blind system Star. It has roller bearings to allow the movement of even heavy slats. This is specifically suitable for the healthcare sector where it can move lead slats to protect from x-rays.

We are currently working on an update on the existing Future vertical blind track that will expand its possibilities. And also new solutions for fixing the Quadro roller blind. making installation even more easy.

#### Injection Molding department growing.

We have renovated a hall with almost 200m2 to increase our new injection molding department for the injection on cords and for medical products. This area will be separated from the normal production and be optimized to have minimum dust in the air to avoid contamination with these sensitive parts.

#### Updates on the Trietex curtain track system

Trietex has been developing new solutions for maximizing bending on the existing track. With a new runner for curved tracks bending radii of down to 200mm are possible - but requiring particular bending machines and techniques.

Also new is an update on the master carriers for the wave flow system - now your curtain waves continue perfectly over the master carriers.

One of the most exciting developments will be a series of new curtain track motors to be available after the summer period. It will offer a great value proposition without sacrificing on

#### HMR Portugal - growing and constant Investments.

2017 was an exciting year for our Portuguese operations. We were expanding and investing at the same time. We started to replace our truck for international transport, we invested in additional extrusion and injection molding machines, installed a backup air compressor, installed a new more powerful water chiller and renewed several parts on existing extrusion machines.

Due to the widely recognized quality of the production of our track spacers for the construction industry demand was growing above market level leading unfortunately to sometimes longer delivery times. But the investments that were taking in parallel have helped to keep this under control.

Also for 2018 we expect a dynamic development with further investments still under way and we are working on increasing our range of products and production capacity even further.
